Across Atlantic Ice examines the evidence to establish how the Americas were first peopled during the last glacial period. In so doing it is presenting something of a paradigm shift. The authors argue that the technological antecedents of the Clovis culture reached North America from across the North Atlantic. According to the now familiar story, mammal hunters entered the continent some 12,000 years ago via a land bridge that spanned the Bering Sea. Distinctive stone tools belonging to the Clovis culture established the presence of these early New World people.
